

# EVOLVE.

## BOOST YOUR CAREER

**BRIDGE  
PROGRAMME**

Creating careers for Computer Science graduates and entry-level IT specialists

## Introducing The Carter Radley Way™

Designed and brought to India by the American consultancy, Carter Radley, The Carter Radley Way™ is a complete method of ACE – accelerated career education – and is the foundation of all our ACE programmes. This practical, project-based system centres on the simultaneous development of the five keys you need to unlock your complete career potential and give you benefit for life. Our professionally designed programmes encourage students to focus on their full academic, personal and professional growth so they learn how to thrive in a rapidly changing world.

The ACE programmes and The Carter Radley Way™ have all been created based on years of experience in the global software industry and at the renowned US-based research university, Carnegie Mellon.

“ACE Bridge prepares you to successfully enter the workplace as a software developer by having you practice software development as if you were already in the workplace. It’s ‘on-the-job’ experience but in a safe, learning environment.”

**MARTIN RADLEY**  
Founding Partner, Carter Radley

# We’ll show you how to be ready for the career you want

## Why choose the Carter Radley ACE\* Bridge programme?

Our programme is designed specifically for those who find themselves struggling in their initial entry to the fast-changing IT industry. ACE Bridge graduates qualify ready to accomplish these first steps with the confidence and skills they’ll need to ensure good progress in their careers, now and in the future.

You’ll gain the work experience and skills industry managers look for in their applicants. Working in a supportive lifelike corporate environment, you’ll learn how to adapt to different work challenges and be a valuable part of a productive team. By creating real web, mobile and desktop application software using the latest industry processes and tools, you’ll develop the skills and portfolio you need for success.

Our world-class programme is adaptable. In as little as 6 months you can achieve the placement you’re looking for but should you need more time to develop, your plan can be extended to suit your goals.

\*Accelerated Career Education

## What is an ACE Bridge?

- Real-life experience**  
You learn a complete set of professional software skills by practicing them in realistic work environments. During interviews you’ll be able to discuss and apply this experience confidently.
- Comprehensive learning**  
You explore the complete software development life cycle using the latest technology, discover your strengths and learn how to best develop your skills.
- Confidence building**  
You acquire a framework to fully understand what it means to be ‘in the workplace’ so when you begin your career, the corporate setting and its challenges will feel completely comfortable to you.
- Asset creation**  
You develop a professional project portfolio that will demonstrate your capabilities to industry managers.
- Career guidance**  
ACE Bridge provides an effective and affordable solution to help you successfully complete your development from graduate to professional.

## What happens week by week?

From the outset of the programme you’ll be placed in a lifelike professional environment. As you progress, regular feedback from your skilled manager will guide and keep you on track. You’ll learn about your strengths, which of your particular skills require improvement and how you can successfully reach your goals.

\*The minimum duration of the Bridge programme is 6 months but students can exit within this time should they successfully attain employment. After 12 months, students are invited to extend their Bridge plan on a monthly basis.

## What are the entry requirements?

You must be a graduate of a B.Tech CSE, BCA or MCA programme or have 1 year of entry-level work experience in an IT or equivalent field.

You must be able to verify that you have some knowledge of and experience with software programming using an object-oriented language.

**Loan support is available for eligible students**

## How long is the programme?

A minimum of 6 months - 12 months full time. Your plan can then be extended on a monthly basis as per your needs and goals.
